

BIOMED BOX PROCEDURES

PLEASE USE THESE PROCEDURES WHEN PREPARING YOUR BIOMEDICAL BOX FOR DISPOSAL:

- Sharps must be placed in an approved container. **IF the container is not self-locking, please tape the lid. IF it is lockable, disregard this step.** Red rigid sharps containers can then be placed in commercial sized bio-medical box.
- Tape bottoms of box securely in two opposing directions; fold opposing flaps twice so you create a flat surface to tape.
- Use a packing tape; do not use duct tape or masking tape.
- Insert liner so that it covers inside box.

BEFORE YOU CALL FOR PICKUP:

- Be aware that is a 45 pound weight limit on each box.
- Fill box only 3/4 full to allow room to make a complete seal around top of liner.
- Use the cinch strap we provide to seal the liner. Peel off tape and cinch strap around liner for an airtight seal.
- Tape top of box securely; there is no need to use handle flaps.
- Make sure that biomedical container is properly sealed and packaged, ready for pickup, on scheduled pickup day.

**IF YOU HAVE QUESTIONS ABOUT BIO-MEDICAL
DISPOSAL PROCEDURES, CALL US (541) 998-3125.**
